### TEXT GENERATORS for BROADCAST NEWS SERVICES

IRISTEXT is a reliable technology from TELEDAC using a proprietary high speed video processor. The I-Mark-BN or I-Mark-BNT models are designed specifically for around the clock, 365 days a year display of BN Cable real time News service or B/N Stock exchange service.

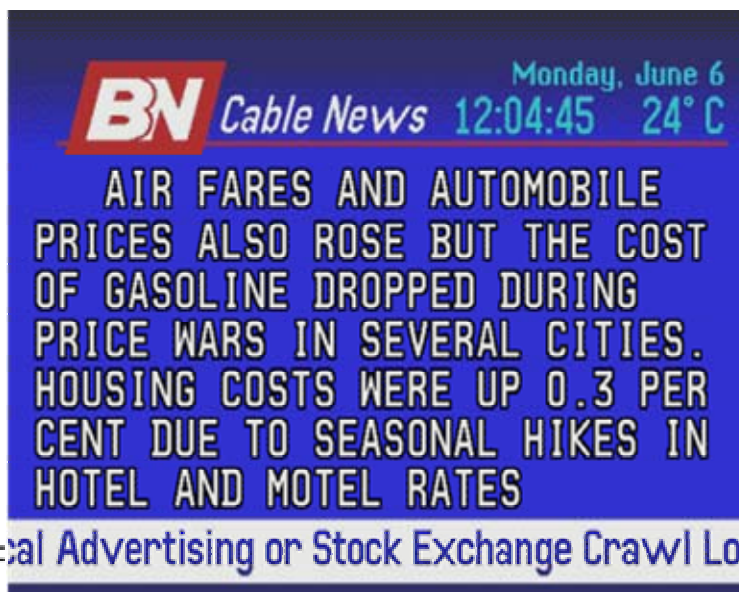

The I-Mark-BNT includes local temperature display. Both models are featuring a special text font optimised for readability given the paragraph format of BN Cable and available screen space.

IRISTEXT displays news from non-volatile memory buffers where up to (2) news cycles can be stored. The gains are protection against lost of the transmission link and local display speed adjustment to suit a specific population needs.

#### **IMPORTANT:**

This model has been discontinued as Broadcast News Cable information is no longer offered by the service provider. If you own an **Iristext-4000-BN** or **Iristext-Mk-BN**, please note that they can be advantageously converted to another Iristext model in order to display messages.
